

ACRYLIC RENDER PRODUCT RANGE

EzyClad

Thermally Efficient Building Systems

EzyClad manufacture a wide range of polymer modified acrylic renders to compliment and fully complete the supply of our premium cladding systems.

These high performance products are suitable for use in the following product specific applications;

- EzyClad Light Weight Cladding Systems
- Brickwork/Blockwork
- AC Sheet
- AAC Block
- Precast Panels
- Light-Weight Systems

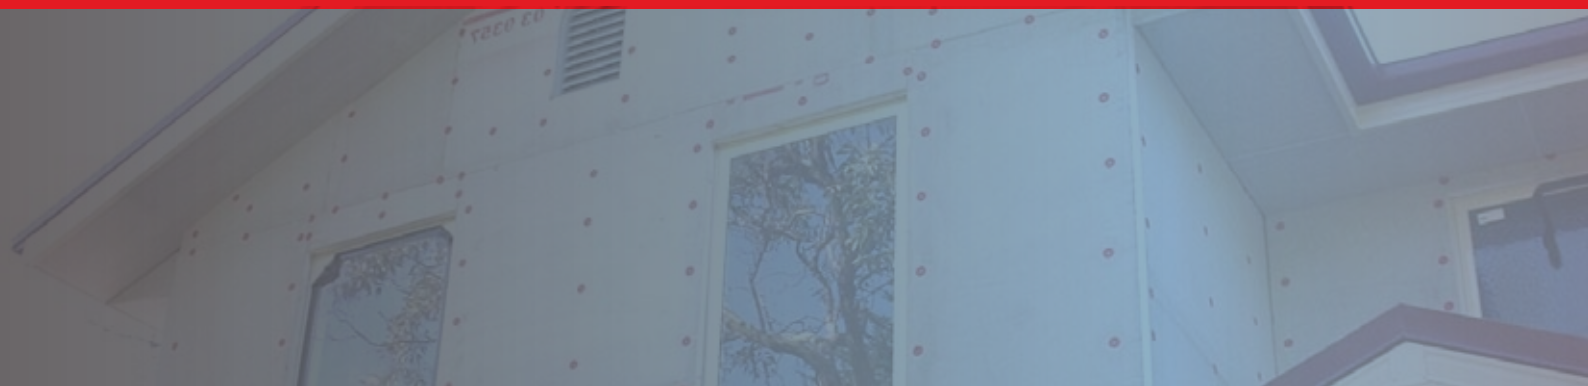

EzyClad polymer modified acrylic renders are manufactured with quality raw products including high grade polymer resins used only in the manufacture of our acrylic render products range. The EzyClad acrylic render range utilises in design and manufacture all available European leading technological advances in engineered polymer resins, inturn bringing to the market a broad range of products demonstrating marked increases in adhesion, strength and flexural properties.

Patchup

EzyClad Patchup is a polymer modified SUPER high acrylic base coat render and structural jointing compound available for supply in 20KG Bags.

EzyClad Patchup is used in application with EzyClad walling systems to help obtain the high positive (+) and negative (-) deflective abilities found in and required by EzyClad systems to achieve AS/NZS4284-1995 compliance. (Wind loading ratings & Weatherproof testing)

EzyClad Patchup performs equally well when used as a basecoat material for application over AC Sheet / AAC Block/ Pre-cast Panel / Paint modified substrates and in other varied applications where above average adhesive qualities are a pre-requisite for binding to non porous or difficult substrates.

ACRYLIC RENDER PRODUCT RANGE

EzyClad

Thermally Efficient Building Systems

EB (Fine Blend)

EzyClad Basecoat fine is a fine grade acrylic render suitable for use in first and second base coat trowel applied render applications. EB Fine is most commonly used for achieving a fine textured basecoat finish suitable for further over coating with a roller applied colour application, and is available in 20KG Bags.

EBA (Natural Coarse Blend)

EBA is a coarse blend acrylic render utilising mainly synthetic fillers, and contains higher flexural properties than found conventionally in base coat render products. EBA is suitable for use in conjunction with EzyClad Light Weight Cladding systems as per EzyClad technical specifications.

EBA performs well when used as a basecoat render material suitable for use over Brickwork / Blockwork / AAC Panels and is available in 20KG Bags.

EB-PRO (Coarse Blend)

EB-PRO is a universal medium base coat material suitable for trowel applied application over varied differing substrates.

EB-PRO utilises in its makeup and design a specialty blend incorporating both natural and synthetic filler additives, and is suitable for use as a levelling compound over AAC Panels /Brickwork /Blockwork /Clay bricks and is available in 20KG Bags.
